

Micro Stretcher

Survival Equipment Services are delighted to launch their Micro Stretcher.

Designed specifically to aid rapid, horizontal/vertical casualty retrieval, the Micro Stretcher collapses into six sections enabling it to be carried in its compact protective cover. It is ideal for storing in land, marine or aviation vehicles as well as being part of a backpack configuration for ground personnel.

This compact and lightweight system can be removed from its cover and erected into a full length (1.8m/6ft) stretcher in seconds.

Its construction comprises carbon fibre rods and strengthening inserts encased in a hardwearing mesh netting frame. These materials contribute to the remarkable strength and unrivalled lightweight characteristics of the Micro Stretcher.

Four carrying handles, four casualty restraining straps, an overbody/crotch strap and a foam head pad ensure that this system offers both patient and rescuers optimum security and ease of handling throughout the retrieval process. Also includes a detachable additional strap for 6-man carrying if required.

An additional lifting strap assembly is available to facilitate lifting the stretcher and casualty by mechanical means.

The Micro Stretcher is available in military spec green, sand, standard emergency orange and black to suit all market requirements.

Available stretcher colours

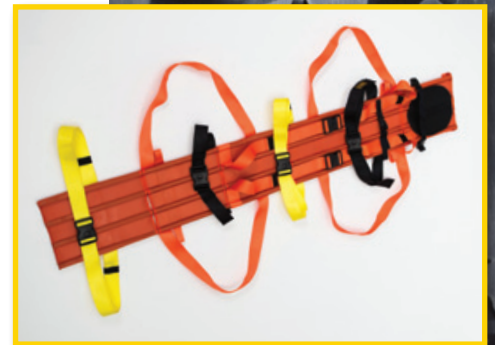

Technical data

Folded Dimensions:	390x300x150mm
Packed Weight:	5.1kg / 11.22lbs
Weight/Stress Tested to:	250Kg / 550lbs
Assembly Time:	< 20 Seconds

Patent Application No: GB 1318816.4

Designed & Manufactured by SES in our UK facility.
