

SOLO-RAFT

Compact single survival raft

Compact & lightweight valise

Fully operational within seconds

In critical circumstances, quick and effective rescue practices is key to personal survival. With the SES emergency Solo-Raft, deployment is rapid allowing ease of entry - minimising exposure to water. This highly compact and lightweight single life raft provides ease of visibility in diminishing light and a secure place of refuge for survivors. Designed for light aviation, yachtsman, off-shore rescue and other critical individual missions where weight and stowage restrictions are vital. The Solo-Raft provides immediate protection and insulation with essential survival aids.

Ease of deployment

Packed in a compact valise the Solo life raft provides ease of self-deployment. Inflation is via a disposable CO² cylinder from the reflective lanyard on the side of the valise where it is securely fastened to avoid inadvertent operation. Fully operational within seconds, boarding is effective through handling loops and the advanced

dipped floor makes entry simpler and gives enhanced water stability by lowering the centre of gravity. Safety is of paramount importance on this design. The lanyard and snap hook acts as a tethering line on inflation, ensuring that the life raft cannot be accidentally separated from the survivor.

Handling loops aid boarding

Suitable applications include:

- Aviation
- Marine
- Offshore
- Leisure

Thermal protection

The valise is tested to withstand temperatures of -30°C. The durable design comprises of a lightweight gas inflated buoyancy chamber. The integrated, highly visible single layer canopy, built in splash guard and transparent visor provide the user with additional thermal protection. A sea drogue fitted to the life raft ensures stability and positioning.

Survival aids

Survival aids are fitted to the life raft as standard and in case of emergency the survivor will have access to a baler, light stick and other essential aids such as water, optional illumination and signal flares.

Specification

- Weight packed: 2.8kg / 6.16lbs, unpacked
- Dimensions in valise: 225mm x 190mm x 110mm
- Tested to hold 310lb in weight
- Resistance tested valise fabric: to temperatures exceeding -30°C/+70°C
- Inflation system: single disposable CO² cylinder (215g)
- Long life single layer canopy with integrated splash guard & transparent visor
- Integrated handling loops
- Integrated survival equipment & survival aids as standard
- Highly visible nylon splash guard
- Fire retardant
- Manufactured to ISO9001 approvals

Service & Support

With the expertise of our in-house technical knowledge and manufacturing capabilities, SES provides a bespoke refurbishment for all your rescue equipment. The Solo-Raft is designed and manufactured at our UK facility and comes complete with a 1 year warranty. As part of our service, testing is requested every 3 years.

Solo – your emergency single life raft solution

The benefits:

- Compact & lightweight with ease of stowage
- Ease of operation in diminishing light
- Integrated tethering line securing life raft to survivor
- Enhanced water stability through advanced dipped floor
- Ease of maintenance from disposable cylinder
- Integrated survival equipment as standard including sea drogue, baler, light stick and other survival aids (including smoke & illumination signal flares)
- High levels of protection during extreme weather conditions
- Integrated sea anchor (drogue) to secure positioning
- Ease of transportation via portable valise
- Compactable with any commercial or military life jacket

High levels of protection
